FEEDING DIRECTIONS

ADULT DOGS

The amount to feed your dog will vary with breed, size, activity level and environment. Typical feeding directions are presented below. Starting with these recommendations, vary the amount offered to maintain the proper body condition of your pet.

<u>WEIGHT</u>	<u>DAILY AMOUNT OFFERED</u>
5 - 15 lbs.	3/4 - 1 3/4 cup
15 - 30 lbs.	1 3/4 - 2 3/4 cups
30 - 45 lbs.	2 3/4 - 3 3/4 cups
45 - 60 lbs.	3 3/4 - 4 3/4 cups
60 - 80 lbs.	4 3/4 - 6 cups
Over 80 lbs.	6 cups plus 1 cup for each additional 15 lbs.

PREGNANT FEMALES

During pregnancy and lactation, females may need two to three times their normal food intake. Use the chart above as a guideline, and provide two and a half times the amount shown.

PUPPIES

- 3/4 - 1 1/4 cup per 5 lbs. of body weight up to 5 months.
- 1/2 - 1 cup per 5 lbs. of body weight up to 8 months.
- 1/3 - 1/2 cup per 5 lbs. of body weight up to 12 months.

To encourage consumption, the food may be moistened in a ratio of five parts food to one part liquid. Offer as much moist food as your puppies will consume in 15 minutes. When feeding moistened food, it is important to clean food bowls after each feeding to prevent spoilage. As your puppies begin to consume the moistened food, gradually reduce the amount of liquid until your puppy is accustomed to eating the dry food.

We recommend you divide the daily amount of food between two or more meals offered at similar times each day. Always provide your dog with plenty of clean, fresh water. Keep all feed and water bowls clean. If you are switching your dog from another diet to MFM 22-8, make sure you gradually make the transition over a period of one week.
